EDUCATION

B.S Online degree in Data Science and Application

Indian Institute of Technology Madras,

📅 2023 – present

PROJECTS

Project 1

Decentralized Storage

📁 Tech Stack: NextJs, ethers, Hardhat, IPFS

- This project facilitates decentralized image upload and sharing on the blockchain using Solidity for the smart contract and NextJs for the front-end interface. It enables users to securely upload images to IPFS (InterPlanetary File System) and share access with specified users through smart contract functionality.

Project 2

Staking dApp

📁 Tech Stack : NextJs, ethers, shadcn, Hardhat

- The StakingDappYT is a decentralized application that enables users to stake ERC20 tokens into the platform and earn rewards. The staking process generates reward tokens per second, rewarding users based on their staked amount and duration.

Project 3

.NFT Staking App -Stake ERC-721 and Earn ERC-20

📁 Tech Stack: - NextJs, ethers, ThirdWeb

- I have build an ERC-721 staking app, where a user can stake an ERC-721 NFT and earn ERC-20 tokens as a reward in return.

Project 4

Task Management

📁 Tech Stack: NextJs, MongoDB, TailwindCss

- This project is a Full stack website where i used NextJs for back-end and frontend. Users can authenticate with their email id, add their tasks, edit their task, many more facilities..... I used MongoDB for database, JWT for authentication

SKILLS

- JavaScript
- TypeScript
- Blockchain
- Solidity
- React.js
- Next.js
- Ether.js
- Web3.js
- Hardhat
- Truffle
- Hyperledger
- Smart Contract Testing
